Bottom printing by using handling curves

we're on it.

Bottom printing by using handling curves

Your **benefits** at a glance:

- Printing on bottom and two other sides
- No special printing station necessary
- For articles with non-centric cones, bottom printing is possible by using driven centering points
- Centers must be centrally round (off-center article necks)
- Possibly reduced machine output

Characteristics

- In addition to a software extension, mechanical and electrical upgrades are required
- We recommend retrofitting by one of our qualified Service technicians
