Centering assistance

(belt, intake)

we're on it.

Centering assistance

(belt, intake)

Your **benefits** at a glance:

- the articles set up by hand are aligned and transported with the appropriate distance to each other to the pickup position of the infeed robot
- even articles that are non-jammable are precisely aligned on the belt and can be optimally gripped by the infeed robot

- the centering assistance simplifies the manual feed of non-jammable articles
- the centering assistance positions the article centrally on the conveyor belt
- The exact positioning of the article on the in feed belt allows the article to be optimally gripped by the robot in the pick-up position at the end of the conveyor
- the installation of the centering assistance can be carried out in accordance with the application in the center on the conveyor or at the end of the belt
- the centering assistance in the middle of the belt is a moving centering plate adapted to the belt speed

Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required
- the retrofitting will be done by one of our qualified service technicians
- our technicians also take over the training with regard to functionality and setting of the centering assistance
