**Foam roll separation**

we're on it.

# Foam roll separation

## Your **benefits** at a glance:

- separation of articles with a sensitive surface
- guided handover of an article between two conveyor belts

- The foam roll separation allows guided transfer of an article from an upstream conveyor belt to the servo motor - controlled input conveyor belt of the machine
- the foam roller separation can be mounted and operated outside the machine paneling
- the separation method requires the additional installation of an infeed plate at the end of the conveyor
- the speed of the foam rollers is synchronous with the machine speed

## Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required
- retrofit of an article-specific infeed plate required
- the retrofitting will be done by one of our qualified service technicians
- our technicians also take over the training with regard to functionality and setting of the foam roll separation
