we're on it.

# Motorized screen adjustment

in Y-direction

## Your **benefits** at a glance:

- there is no need to stop the machine for screen adjustments
- increasing productivity and less reject due to saved time for screen adjustments, which can be made at runtime
- input of correction values can be entered user-friendly via HMI

- the screen printing machine is equipped with servomotors for the electric sieve adjustment in the Y-direction
- a print image correction can be done comfortably via HMI
- the screen will be moved to the desired position according to the entered values
- the machine does not need to be stopped, which is a big advantage in contrast to conventional, manually performed sieve adjustment

## Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required
- we recommend the retrofitting by one of our qualified service-technicians
- as a detailed training in terms of functionality, configuration and operating principle makes sense
