Thread detection

we're on it.

Thread detection

Your benefits at a glance:

- reliable detection of a raised thread on the thread neck

- due contactless functioning, the system is maintenance-free

- the system allows a quick setup and conversion

- high testing performance

- the thread recognition is especially designed for contactless bottle positioning

- the system includes a camera, illumination unit, PC and corresponding to software package

- the software determines the angular position of the beginning of a thread and transmits this value to the machine software which feeds the item to all other processes/ stations oriented

- the system is suitable for glass, plastic and metal items

Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required

- we recommend the retrofitting by one of our qualified service technicians

- as a detailed training in terms of functioning, configuration and operating principle regarding the thread detection system makes sense
