Twingo-separation

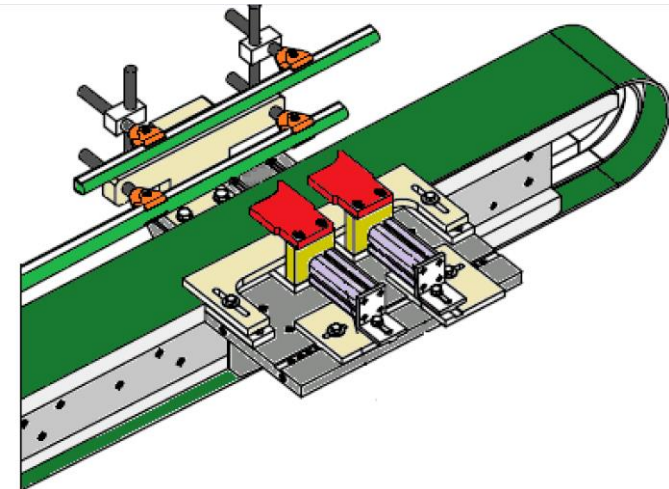

we're on it.

Twingo-separation

Your **benefits** at a glance:

- automatic separation of articles
- low tooling costs
- short set-up times

- the Twingo separation allows the automatic separation of articles
- the separation consists of two short-stroke cylinders, which are activated in alternation
- the first cylinder separates the articles on the input belt and absorbs the impact pressure
- the second cylinder releases the previously separated article depending on the machine cycle so that it arrives at the end of the belt at the appropriate time in the pickup position of the robot

Characteristics

- in addition to software expansion, mechanical and electrical retrofits are required
- we recommend the retrofitting by one of our qualified service technicians
- our technicians also take over the training with regard to functionality and setting of the Twingo separation
